

# ABSTRACT

An epoxy resin represented by general formula (2),

R<sub>1</sub>-R<sub>4</sub> indicate hydrocarbon group of carbon number 1-6, n is 0 or integer of 1 or more and X in aromatic compound (1)

is a bond or following general formula

wherein R<sub>1</sub>-R<sub>6</sub> indicates hydrogen atom or hydrocarbon group of carbon number 1-6,

obtained by reacting aromatic compound represented by general formula (1) and epihalohydrine,

having molecular weight distribution comprising, content of n=0 component in the epoxy resin represented by general formula (2) is 60% or less and epoxy equivalent is 250g/eq or over.
